

Wäre es nicht schön, wenn man eine Email bekommen könnte, sollten Updates vorliegen?

Hier die Lösung

[update-notification.sh](#)

```
count_file="/usr/local/bin/.updates"
email_addresses="someone@somewhere.gmx"

packages=`yum check-update --quiet | cut -d " " -f 1 | sed -e '/./!d' |
sort | uniq`
count_packages=`echo $packages | wc -w`

if [ ! -e $count_file ]
then
    echo 0 > $count_file
fi

#old_packages=`cat $count_file`
if [ `cat $count_file` = $count_packages ]
then
    exit 0
fi

echo $count_packages > $count_file

if [ $count_packages -gt 0 ]
then
    #Updates werden heruntergeladen
    yum --downloadonly update --quiet
    if [ ! $? = 0 ]
    then
        for address in $email_addresses
        do
            echo -e "Das System `hostname` hat
$count_packages Updates\nDas Herunterladen war
fehlerhaft!\n\n$count_packages" \
                | mail -s "Warning!! $count_packages
Updates available for `hostname`, Download fehlerhaft" $address
        done
    else
        for address in $email_addresses
        do
            echo -e "Das System `hostname` hat
$count_packages Updates\nDas Herunterladen ergab keine
Fehler\n\n$count_packages" \
                | mail -s "$count_packages Updates
available for `hostname`" $address
        done
    fi
fi
```

fi
